Glencoe

Avalanche Hazard Forecast

Issued 30/01/2010

FOR PERIOD 18:00HRS Sat 30/01/2010 TO 18:00HRS Sun 31/01/2010

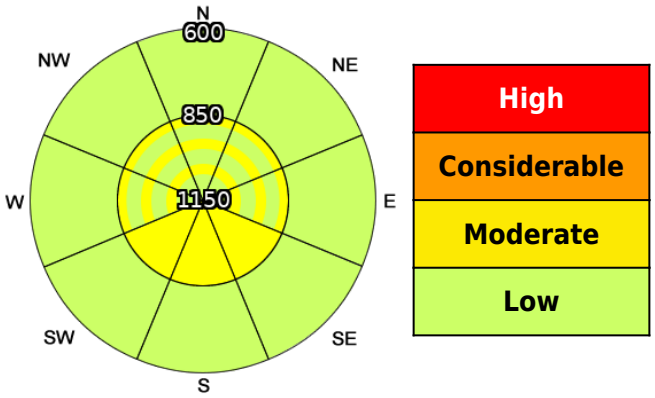

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Sunday 31/01/2010

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Areas of localised weakly bonded windslab will continue to develop mainly on South-East to South-West aspects above 850 metres. Due to cross loading other aspects with sheltered hollows and especially sheltered gullies will also contain unstable localised deposits. The avalanche hazard will be Moderate. Cornices on Southerly aspects will be fragile.

Forecast Weather Influences

Strong North-Westerly winds and very light snow showers will affect the area overnight continuing through the day. It will remain cold freezing at all levels.

Comments

The light snow showers may come as only a dusting of snow in Glencoe. Climbing conditions are good.
