

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Monday 01/02/2010

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Localised accumulations of poorly-stabilised windslab will form on steep North through East to South aspects above 800m. More extensive windslab build up expected on East-facing slopes and gullies. Good stability expected in all other locations. The avalanche hazard will be Considerable.

Forecast Weather Influences

There will be light snow showers. Winds will be moderate North-West and back South-West during the day. (Low confidence in snow amounts. See Comments).

Comments

Low confidence in forecasted snow amounts. In the event of heavier snowfall instability will be more widespread.
