Issued 01/02/2010

Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Mon 01/02/2010 TO 18:00HRS Tue 02/02/2010

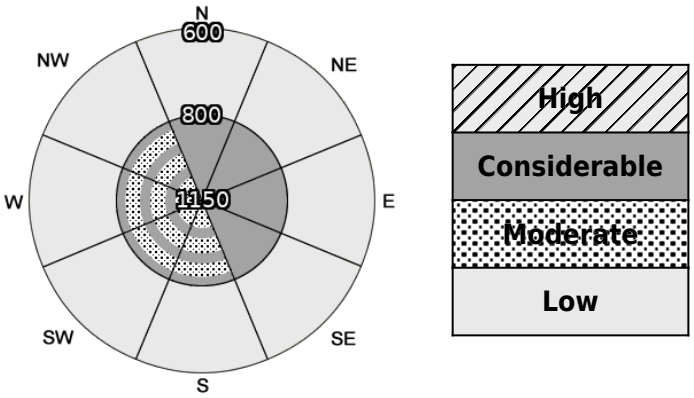

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Tuesday 02/02/2010

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Weakly bonded windslab will be present mainly on sheltered North through East to South-East aspects above 800 metres. Avalanches are likely on steep slopes and in gullies where significant deposits exist. Areas of localised windslab will also be present on other aspects due to cross loading.The avalanche hazard will be Considerable. New cornices will be unstable.

Forecast Weather Influences

Overnight snow showers with variable winds, freezing level will be around 800 metres. During the day light winds will be from the North and mainly dry with the freezing level lowering to 300 metres.

Comments

Caution is required on the approach to climbs.
