

Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Wed 10/02/2010 TO 18:00HRS Thu 11/02/2010

Hazard Level	Avalanche Probability
Very High	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
High	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
Considerable	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
Moderate	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
Low	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

Forecast Weather Influences

Cold and dry conditions will continue

Forecast Snow Stability and Avalanche Hazard

Localised areas of hard, moderately well bonded windslab will be present on many steep slopes above 900m. The avalanche hazard will be Moderate

Observed Avalanche Hazard - Wed 10/02/2010

Observed Weather Influences

Cold and settled conditions

Observed Snow Stability and Avalanche Hazard

Localised areas of hard windslab are present on many steep slopes. In places this snow is moderately bonded to the underlying snowpack. The avalanche hazard is Moderate

Mountain Conditions

Observed Mountain Travel Conditions

Reasonable cover above 750m.

Comments

Reasonable climbing conditions on the upper crags.
