Avalanche Hazard Forecast

Issued 13/02/2010

FOR PERIOD 18:00HRS Sat 13/02/2010 TO 18:00HRS Sun 14/02/2010

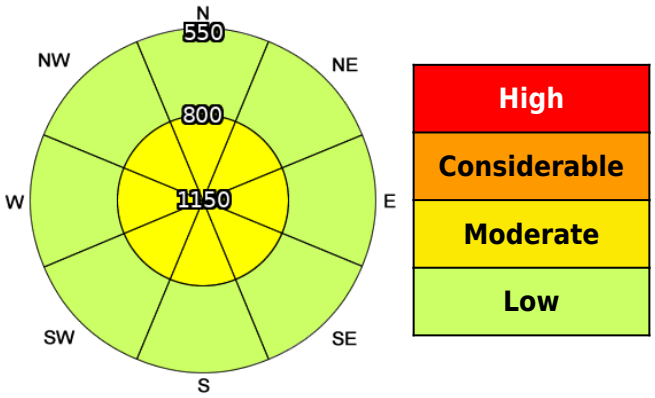

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Sunday 14/02/2010

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

New accumulations of snow are not expected to be significant and only above 900 metres. The snowpack will slowly become moist at most levels. Some surface wet snow instabilities will exist on the steeper slopes on all aspects mainly above 800 metres. Cornices will also be unstable. The avalanche hazard will be Moderate.

Forecast Weather Influences

Milder conditions will start to affect the area with strengthening South-Westerly winds. Freezing level will rise to around 1000 metres. Overnight light precipitation falling as snow at first turning to rain below 900 metres.

Comments

New snow amounts should be light with a dusting over the summits. At lower levels light drizzle and cloudy. Becoming colder again on Monday.
