

THE AVALANCHE HAZARD WILL BE CONSIDERABLE**Avalanche Hazard Forecast for Sunday 14/02/2010****Avalanche Problems****Forecast Snow Stability & Avalanche Hazard**

On steep North-East aspects above 800 metres human triggered avalanches are probable due to new snow. This weakness will also be on North and East aspects due to crossloading. The avalanche hazard will be Considerable.

**Forecast Weather Influences**

There will be light snow amounts on Sunday with a slightly rising temperature trend, however it will remain below freezing above 800 metres. Winds will be light from the South-West.

Comments

Loose snow avalanches possible on steep S aspects if there are any sunny breaks. Some cornices looking pretty fragile due to the warming.
