Avalanche Hazard Forecast

Issued 15/02/2010

FOR PERIOD 18:00HRS Mon 15/02/2010 TO 18:00HRS Tue 16/02/2010

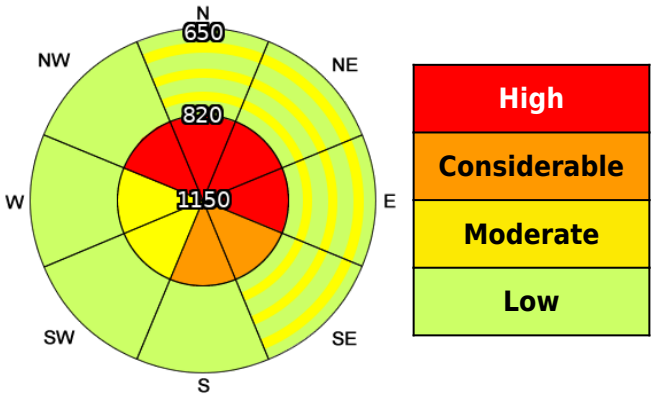

THE AVALANCHE HAZARD WILL BE HIGH

Avalanche Hazard Forecast for Tuesday 16/02/2010

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

New accumulations of windslab will continue to form and become extensive in all sheltered areas. The greatest accumulations will be in gullies and hollows, and on North-West, North through to East aspects above 820 metres. Avalanches will occur where deep deposits have formed and the avalanche hazard will be High.

Forecast Weather Influences

Overnight above 350 metres, snow showers, these will be heavy at times with Westerly winds. During the day winds will veer to the South-East with light snow showers. Freezing level 450 metres.

Comments

As it becomes colder the moist snow will start to consolidate, however large extensive areas of weakly bonded windslab will still be present in many sheltered locations, take care.
