Issued 20/02/2010

Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Sat 20/02/2010 TO 18:00HRS Sun 21/02/2010

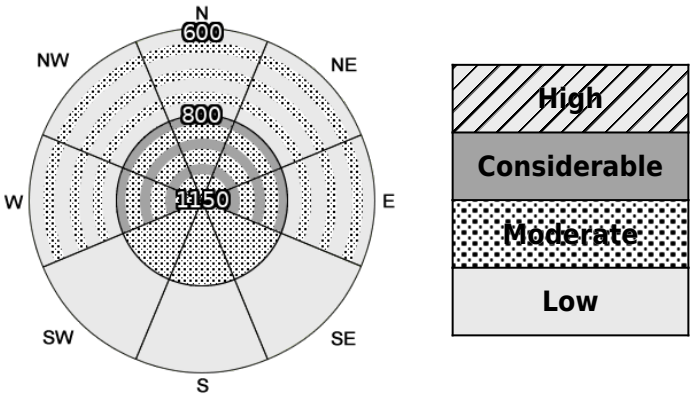

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Sunday 21/02/2010

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Again the cold conditions will continue to affect the area which help to consolidate the snowpack slightly. However on all aspects above 900 metres some isolated areas of weakly bonded snow will persist especially on the steeper slopes, gully exists and scarp slopes. The avalanche hazard will be Considerable.

Forecast Weather Influences

It will remain cold and generally dry with light Southerly winds. Freezing at all levels.

Comments

Another fine day, with good skiing and climbing conditions.
