Issued 22/02/2010

Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Mon 22/02/2010 TO 18:00HRS Tue 23/02/2010

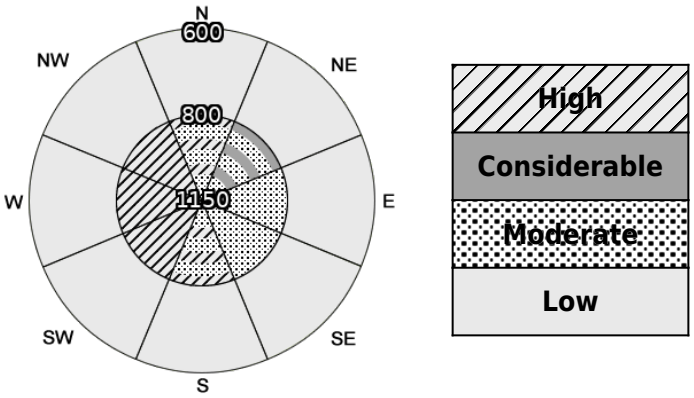

THE AVALANCHE HAZARD WILL BE HIGH

Avalanche Hazard Forecast for Tuesday 23/02/2010

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

There will be redistribution of the existing unconsolidated snow into sheltered gullies and hollows and onto sheltered slopes mainly with South-West to North-West aspects above 800 metres. This will be deposited onto a fragile layer of surface hoar, will be very poorly bonded and avalanches will occur. The avalanche hazard will be High.

Forecast Weather Influences

It is expected to remain cold and dry, with moderate and strengthening East winds.

Comments

Surface hoar is widespread on the surface of the snowpack.
