

## THE AVALANCHE HAZARD WILL BE CONSIDERABLE

### Avalanche Hazard Forecast for Monday 01/03/2010

#### Avalanche Problems

#### Forecast Snow Stability & Avalanche Hazard

Weakly bonded windslab will affect South-East through West to Northerly aspects mainly above 750 metres especially in areas of steep, sheltered terrain. The extensive weak faceted layer will remain within the snowpack in most areas. Localised weaknesses will also affect other aspects and lower altitudes. The avalanche hazard will be Considerable.

#### Forecast Weather Influences

Dry cold conditions will continue and the wind will back from the North-East to the North-West. There may be the occasional isolated snow showers.

#### Comments

Some consolidation has taken place in the most recent snowpack but no change in the weak faceted layer. Good route finding in avalanche terrain required.
