

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Tuesday 02/03/2010

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Little change is expected in the snowpack conditions. A deeply buried layer of facets will continue to create instabilities in the extensive areas of unstable windslab which will exist mainly on South through West to North-West aspects above 500 metres where avalanches are likely. Wind redistribution will continue to create some patches of poorly bonded windslab on other aspects. The avalanche hazard will be Considerable.

Forecast Weather Influences

Moderate Northerly-Westerly winds will ease and back to the South-West. It will be dry with long sunny spells. After a frosty start the freezing level will rise to around 500 metres.

Comments

Buried surface hoar layers and facets likely to create a significant avalanche hazard for quite some time.
