

Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Sun 07/03/2010 TO 18:00HRS Mon 08/03/2010

Hazard Level	Avalanche Probability
Very High	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
High	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
Considerable	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
Moderate	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
Low	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

Forecast Weather Influences

A dry day is expected with light winds and a freezing level of around 700m.

Forecast Snow Stability and Avalanche Hazard

The snowpack will continue to gradually stabilise at all levels. Localised instabilities will be present on steep slope inclinations. On slopes exposed to the sun, surface instabilities will develop during the day. The avalanche hazard will be Moderate.

Observed Avalanche Hazard - Sun 07/03/2010

Observed Weather Influences

Dry day with very light winds and the freezing level at around 1100m.

Observed Snow Stability and Avalanche Hazard

The snowpack is gradually consolidating and stabilising at all levels. On slopes which have been previously exposed to the sun, there is now a melt-freeze crust on the snow surface. Instabilities are still present on steep slope inclinations. The avalanche hazard is Moderate

Mountain Conditions

Observed Mountain Travel Conditions

Good general cover above 400m.

Comments

Looks like the sun might come out tomorrow!
