Glencoe

Avalanche Hazard Forecast

Issued 12/03/2010

FOR PERIOD 18:00HRS Fri 12/03/2010 TO 18:00HRS Sat 13/03/2010

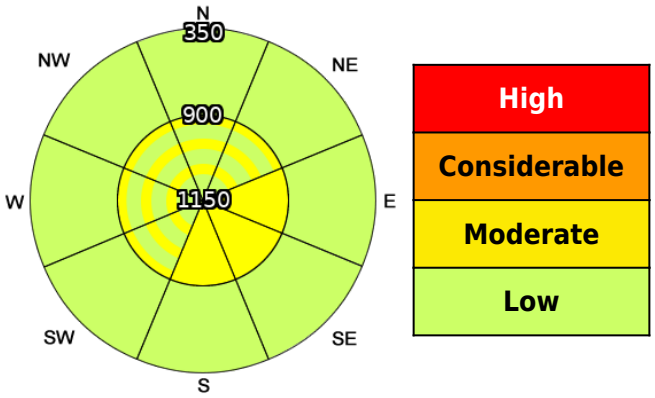

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Saturday 13/03/2010

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

New snow amounts are not expected to be significant but in the snow showers the strong North-Westerly winds will form localised pockets of windslab in sheltered locations. The greatest accumulations will be above 850 metres on East through South to South-West aspects. Steep slopes, sheltered gullies and scarp slopes will be particularly effected. The avalanche hazard will be Moderate.

Forecast Weather Influences

Overnight a few light snow showers are expected mainly above 850 metres with North-Westerly winds. During the day, more light passing snow showers will occur above 800 metres with strengthening North-Westerly winds.

Comments

A ridge of high pressure will give way to a showery North-Westerly airflow. Some dry weather and some precipitation the amounts are uncertain.
