

Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Thu 18/03/2010 TO 18:00HRS Fri 19/03/2010

Hazard Level	Avalanche Probability
Very High	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
High	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
Considerable	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
Moderate	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
Low	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

Forecast Weather Influences

It will be a showery day with strong South-Westerly winds. The showers will fall as snow above about 1000 metres.

Forecast Snow Stability and Avalanche Hazard

The existing snowpack will remain wet and instabilities will persist, especially on steep slopes on all aspects. New areas of damp, poorly bonded windslab will be deposited on North to East aspects, and in other sheltered locations above 1000 metres, where avalanches are likely. The avalanche hazard will be Considerable.

Observed Avalanche Hazard - Thu 18/03/2010

Observed Weather Influences

It was a mild day with the freezing level well above the summits. Rain fell during the afternoon. Strong winds were from the South.

Observed Snow Stability and Avalanche Hazard

The snowack has become saturated. Wet snow instabilities exist on steep slopes and in gullies on all aspects above 900 metres. Remaining cornices are prone to collapse. The avalanche hazard is Considerable.

Mountain Conditions

Observed Mountain Travel Conditions

Patchy cover below about 900m, thawing at all levels.

Comments

After another windy day on Friday, the winds are expected to ease for the weekend.
