Glencoe

Avalanche Hazard Forecast

Issued 27/03/2010

FOR PERIOD 18:00HRS Sat 27/03/2010 TO 18:00HRS Sun 28/03/2010

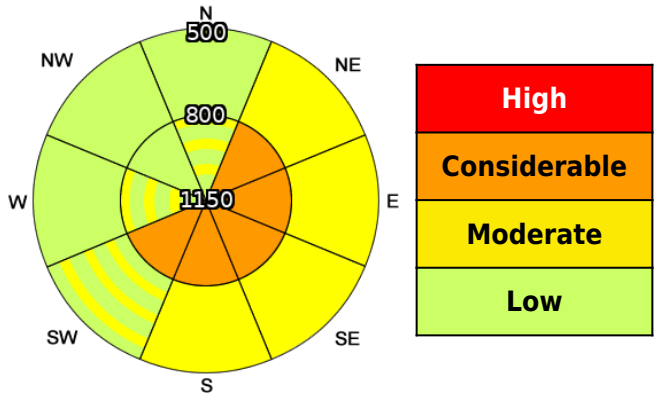

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Sunday 28/03/2010

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Poorly bonded windslab will be deposited in sheltered gullies and hollows and on mainly North-East through East and South to South-West aspects above 800 metres where avalanches are likely. The old snowpack will continue to re-freeze. The avalanche hazard will be Considerable.

Forecast Weather Influences

Snow showers are expected overnight and during the day with the freezing level around 700 metres. The wind is expected to be strong West-North-West overnight and strong Northerly during the day.

Comments

The old snowpack will re-freeze and become increasingly hard and icy.
