Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Mon 29/03/2010 TO 18:00HRS Tue 30/03/2010

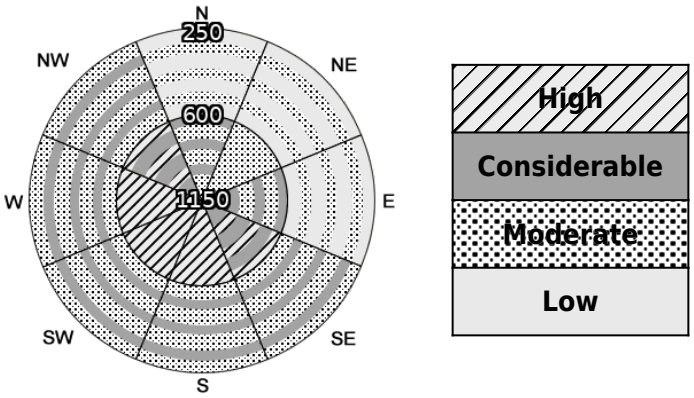

THE AVALANCHE HAZARD WILL BE HIGH

Avalanche Hazard Forecast for Tuesday 30/03/2010

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

There will be significant drifting of snow in the very strong winds. Deep fresh accumulations of unstable windslab will be deposited in sheltered areas. These will be on mainly, but not exclusively on South-East through South and West to North-West aspects above 600 metres where avalanches will occur. There will also be accumulations of windslab at lower levels on these aspects. The avalanche hazard will be High.

Forecast Weather Influences

Snowfall is expected overnight and during the day with very strong North-Easterly winds. The freezing level is expected to be around 250 metres during the day.

Comments

A nice bright day today. Tuesday looks like being completely different: wild, very windy and snowy.
