Issued 01/04/2010

FOR PERIOD 18:00HRS Thu 01/04/2010 TO 18:00HRS Fri 02/04/2010

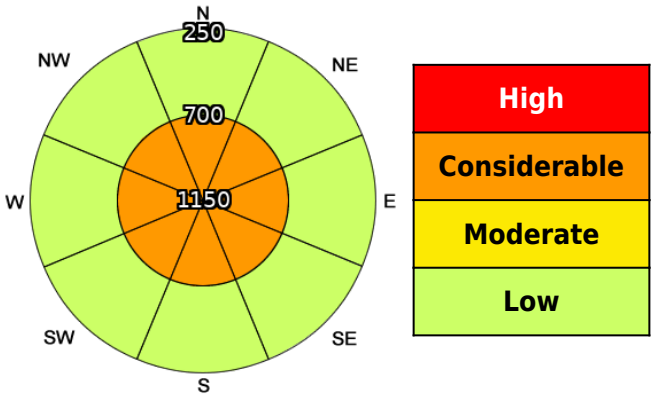

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Friday 02/04/2010

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Winds have varied in direction over the last few days leading to areas of weakly bonded windslab on many steep slope aspects above 800 metres. The greatest unstable deposits will be present on steep North-East through East to South aspects above 900 metres. Newly formed cornices are unstable and exist on many aspects. The avalanche hazard will be Considerable

Forecast Weather Influences

It will stay generally dry. Overnight, the winds will be fresh South-Westerly moderating and becoming Southerly during the day. The freezing level will vary between 450 and 550 metres with summit temperatures at -3 to -4c.

Comments

Good Friday looks like being a fine dry day starting off with a frost in the glens. Wintry weather slowly retuning during and after the week-end.
