Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Mon 05/04/2010 TO 18:00HRS Tue 06/04/2010

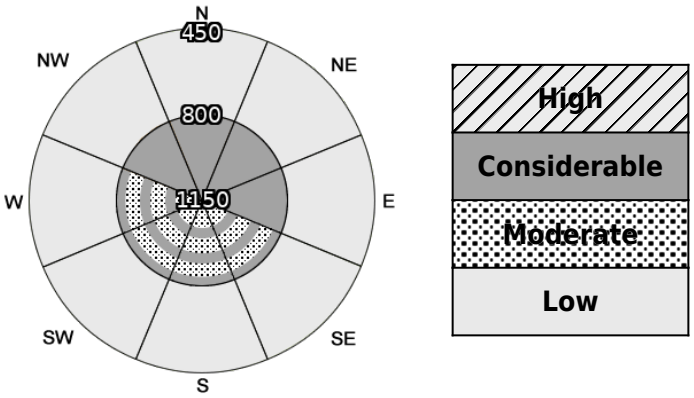

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Tuesday 06/04/2010

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Wet snow instabilities will exist on many steep slopes and gullies earlier in the day. Cooler conditions later with new snow and the strong South-South-Westerly winds will form unstable accumulations of windslab in the most sheltered of summit gullies and hollows of many aspects and on steep scarp slopes with a mainly North-West through North to Easterly aspect above 900 metres. The avalanche hazard will be Considerable

Forecast Weather Influences

Precipitation will fall as heavy rain and sleet overnight turning to snow at higher levels on Tuesday. Winds will be storm force overnight becoming gale force through the day from a South-South-Westerly direction.

Comments

Becoming less mild through the course of Tuesday.
