

Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Tue 06/04/2010 TO 18:00HRS Wed 07/04/2010

Hazard Level	Avalanche Probability
Very High	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
High	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
Considerable	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
Moderate	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
Low	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

Forecast Weather Influences

Showers will continue with fresh snow falling above 1000m. Light to moderate South-West winds

Forecast Snow Stability and Avalanche Hazard

Below 1000m, the snowpack will continue to thaw and stabilise. Above 1000m, localised areas of unstable snow will be present. Greatest accumulations will be on steep North, North-East and East aspects. The avalanche hazard will be Considerable

Observed Avalanche Hazard - Tue 06/04/2010

Observed Weather Influences

Heavy rain with wet snow falling above 1150m. Light to moderate Southerly winds

Observed Snow Stability and Avalanche Hazard

The snowpack is wet at all levels. Below 1050m, the snowpack is generally stable. Above this altitude, wet snow instabilities are present on steep slopes. The avalanche hazard is Considerable

Mountain Conditions

Observed Mountain Travel Conditions

Main cover above 800m.

Comments

Pretty wet day today, with rain right up to around 1100m.
