Avalanche Hazard Forecast

Issued 06/04/2010

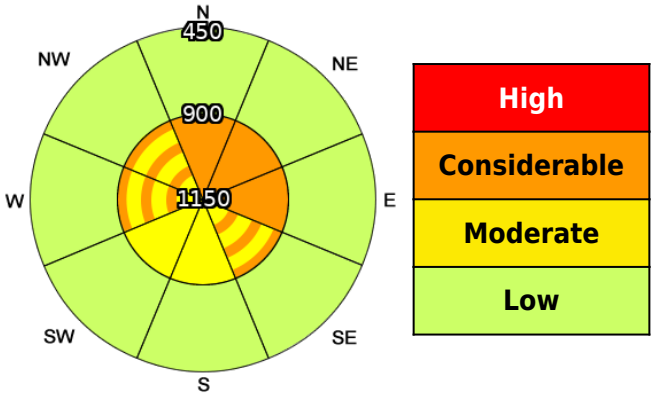

FOR PERIOD 18:00HRS Tue 06/04/2010 TO 18:00HRS Wed 07/04/2010

Avalanche Hazard Forecast for Wednesday 07/04/2010

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Cooler drier conditions overnight will start to firm up the existing snow cover. Snow showers and Southerly winds will form areas of unstable windslab in sheltered summit gullies and hollows of many aspects and on steep scarp slopes mainly with a North to Easterly aspect above 900 metres.

Forecast Weather Influences

It will be mainly dry overnight with snow showers affecting the higher slopes of the area on Wednesday. Winds will be fresh from a South-Westerly direction and freezing levels will be around 900 to 1000 metres.

Comments

Slightly cooler with snow showers.
