

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Sunday 19/12/2010

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Avalanches are likely above 800 metres mainly on South-West through West to Northerly aspects. Steep terrain, gully heads, coire rims and crag aprons will be particularly affected. Instabilities will remain on steep East and South-East aspects. The avalanche hazard will be Considerable.

Forecast Weather Influences

It will remain very cold with snow showers on moderate Easterly winds.

Comments

Little change in the snowpack due to the very cold temperatures.
