

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Sunday 19/12/2010

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Weakly bonded windslab on East through South to South-West aspects will persist above 850 metres with newly re-distributed snow on West to North-West aspects. On all aspects the new snow and older slab sits on hard neve. The avalanche hazard will be Considerable.

Forecast Weather Influences

Snow showers, sometimes heavy are forecast with continued cold temperatures and light Easterly winds.

Comments

Steep convex terrain on exit slopes on nearly all aspects will need care to negotiate around.
