

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Wednesday 22/12/2010

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Pockets of poorly bonded windslab exist on mostly South-East to South-West aspects. Where these are on steep, convex and unsupported locations stability will be marginal. Localised instabilities will also persist on steep gully exits and around coire rims above 900m. The avalanche hazard will be Considerable

Forecast Weather Influences

Little change. It will remain cold and dry overnight and during the day.

Comments

Another blue sky day with very cold temp forecast in the glens for Wed.
