

**THE AVALANCHE HAZARD WILL BE CONSIDERABLE**

**Avalanche Hazard Forecast for Monday 27/12/2010**

**Avalanche Problems**

**Forecast Snow Stability & Avalanche Hazard**

Soft poorly bonded windslab will continue to be deposited on mainly North-West to North-East aspects above 800 metres where avalanches are likely. Patches of windslab will also form on other aspects due to cross loading. Fresh cornices will be soft and prone to collapse. Where scoured by the wind the snowpack will be firm and icy. The avalanche hazard will be Considerable.

**Forecast Weather Influences**

Overnight snow is expected to become light and patchy through the day. Moderate winds will be from the South, with the freezing level rising to around 500 metres.

**Comments**

A gradual change to milder conditions expected over the next few days.
