

Avalanche Hazard Forecast for Tuesday 28/12/2010

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Areas of weakly-stabilised snow will persist on many North-West through North to East aspects above 900m and new drifting will contribute to instability in these locations. Additional consolidation expected at lower altitudes as temperature gradients within the snowpack ease. The avalanche hazard will remain Considerable.

Forecast Weather Influences

There will be some light snowfall on moderate South-Easterly winds.

Comments

Very quiet at Creag Meagaidh at present.
