

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Sunday 02/01/2011

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Stability will remain generally good throughout with the return of the cooler conditions. A breakable crust overlies is widespread and overlies localised pockets of less stable sub layers on many aspects; although weakly bonded these would require high loadings to effect any release. The avalanche hazard will be Low.

Forecast Weather Influences

The cooler conditions will persist and it will remain dry with Northerly winds. Midday summit temperatures forecast for -6 degrees Celsius.

Comments

Icy paths becoming a feature in the cooler conditions.
