

THE AVALANCHE HAZARD WILL BE HIGH

Avalanche Hazard Forecast for Monday 10/01/2011

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Unstable windslab will become much deeper and more windspread on all North to East aspects above 800m where avalanches will occur. Weak collapse-prone cornices will develop above many of these locations. Wind-scoured South-West to West aspects will show improved stability. The avalanche hazard will be High.

Forecast Weather Influences

Heavy persistent snowfall on a much stronger South-West airflow. Winds will ease during the day.

Comments

A period of very poor stability in prospect.
