

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Friday 14/01/2011

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

As the freezing level lowers the snowpack will begin to stabilise. New accumulations of windslab will develop on Northerly to Easterly aspects. Localised instabilities will affect most aspects in areas of steep and convex terrain above 800 metres. The avalanche hazard will be Moderate.

Forecast Weather Influences

Overnight rain will turn to sleet then snow showers during Friday as the freezing level falls from 1600 metres to 800 metres. The winds will be strong and from the South-West.

Comments

Snowpack surface generally soft and wet, but dry cold layers remain in deeper accumulations.
