

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Sunday 16/01/2011

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

There will be some wet snow surface instability and weakness on very steep ground. The deeper snowpack will be generally strong above 700 metres. In General the snowpack will be isothermal and well bonded except for some surface weakness. The avalanche hazard will be Moderate.

Forecast Weather Influences

Rain will ease off tonight with continued strong South-West winds. There will be some cooling with snow showers above 900 metres.

Comments

The warming cycle may contribute to glide activity on slabby ground base.
