

Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Fri 21/01/2011 TO 18:00HRS Sat 22/01/2011

Hazard Level	Avalanche Probability
Very High	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
High	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
Considerable	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
Moderate	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
Low	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

Forecast Weather Influences

Another dry day with light to moderate North-West winds is expected. The freezing level will be around summit levels.

Forecast Snow Stability and Avalanche Hazard

The snowpack will continue to slowly consolidate and stabilise. However, instabilities will remain on steep slopes and in gullies, on North through East to South aspects above 900 metres. The avalanche hazard will be Moderate.

Observed Avalanche Hazard - Fri 21/01/2011

Observed Weather Influences

It was a dry but cloudy day with moderate winds from the North-West. It was just freezing at summit levels.

Observed Snow Stability and Avalanche Hazard

Stability is generally improving in the settled conditions. However, a few instabilities remain on steep slopes on mainly North through East to South aspects above 900 metres. The avalanche hazard is Moderate.

Mountain Conditions

Observed Mountain Travel Conditions	Main cover above 750m. Still a bit thin for ski touring.
Comments	A few teams out climbing today, more expected over the weekend.
