

## THE AVALANCHE HAZARD WILL BE LOW

### Avalanche Hazard Forecast for Friday 28/01/2011

#### Avalanche Problems

#### Forecast Snow Stability & Avalanche Hazard

Stability will be good in most locations. Isolated pockets of less stable windslab present at the very highest elevations on multi aspect gully flanks above 900m are not significant, although some large cornices still remain a feature around coire rims. The avalanche hazard will be Low.

#### Forecast Weather Influences

High pressure will maintain the dry cooler conditions. Winds will be fresh to light Westerly.

#### Comments

Looks like fine settled conditions for the time being
