

THE AVALANCHE HAZARD WILL BE CONSIDERABLE**Avalanche Hazard Forecast for Saturday 05/02/2011****Avalanche Problems****Forecast Snow Stability & Avalanche Hazard**

The very weakly bonded slab instability at depth will persist through the forecast period. Rain will further load the snowpack. Human triggered avalanches are likely. Avalanches are likely on mainly North-East to South-East aspects above 600 metres. The avalanche hazard will be Considerable.

**Forecast Weather Influences**

The warming trend will end tonight with no precipitation in the forecast period. Strong Westerly winds will continue and the freezing level will drop to 500 metres.

Comments

Large cornice development on NE to SE aspects. Probably need to wait out this cycle in safe terrain.
