

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Monday 07/02/2011

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Further windslab accumulations will develop on North-East to South-East aspects above 900 metres. North and South aspects may also have localised deposits due to cross loading. Elsewhere the snowpack will remain generally well bonded and stable. The avalanche hazard will be Moderate

Forecast Weather Influences

Scattered snow showers are expected on moderate increasing to strong Westerly winds. The freezing level will be at around 760 metres.

Comments

Large areas of boiler plate ice around making underfoot conditions a bit tricky.
