

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Saturday 12/02/2011

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Heavy drifting will lead to weakly bonded windslab developing in lee areas. Avalanches are likely mainly on Westerly to Northerly aspects above 700 metres. Due to cross loading localised deposits will affect other areas. Elsewhere the snowpack will remain firm and stable. The avalanche hazard will be Considerable.

Forecast Weather Influences

Overnight and into Saturday morning there will be significant snowfall on strong South-East winds. The winds will gradually ease to moderate as the day progresses. The freezing level will lower to 200 metres.

Comments

Blizzard conditions with heavy drifting expected on Saturday morning.
