

## THE AVALANCHE HAZARD WILL BE CONSIDERABLE

### Avalanche Hazard Forecast for Sunday 20/02/2011

#### Avalanche Problems

#### Forecast Snow Stability & Avalanche Hazard

Fresh weakly stabilised windslab will persist on highest, sheltered North-West through North to North-East aspects above 900m. Stability will remain marginal in these and other multi aspect gully exits and coire rims where recent deep accumulations are present due to cross-loading. Any recently formed cornices will remain fragile and liable to collapse. The avalanche hazard will be Considerable.

#### Forecast Weather Influences

It will remain dry with moderate Southerly winds overnight and during the day. Freezing levels will remain around 600m.

#### Comments

Weaknesses in recent accumulations still persist at highest elevations.
