

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Monday 21/02/2011

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Snow showers and drifting in the strong winds will add to the already extensive areas of windslab which exist on West through North to North-East aspects above 800 metres. Patches of windslab will also accumulate through cross loading in sheltered locations on other aspects. Where exposed to the strong winds, the snowpack will generally be scoured, and stability will be much better. The avalanche hazard will be Considerable.

Forecast Weather Influences

Snow showers are expected overnight and through the day. Strong Southerly winds will back to the South-East. The freezing level will be around 800 metres.

Comments

Strong Southerly winds continuing.
