

Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Wed 02/03/2011 TO 18:00HRS Thu 03/03/2011

Hazard Level	Avalanche Probability
Very High	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
High	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
Considerable	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
Moderate	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
Low	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

Forecast Weather Influences

Overnight some light rain is expected at all levels with a freezing level above the summits. In the day the freezing level will lower to around 1000 metres and winds will be light and variable.

Forecast Snow Stability and Avalanche Hazard

The snowpack will moisten and soften overnight, re-freezing in the cooler daytime temperatures. The snowpack will be generally well bonded and stable on all aspects and at all levels. The avalanche hazard will be Low

Observed Avalanche Hazard - Wed 02/03/2011

Observed Weather Influences

It has been a warm dry day with strong South-Westerly winds.

Observed Snow Stability and Avalanche Hazard

There is little change to the snowpack, it remains generally well bonded and stable throughout. Some pockets of moderately stable windslab remain on East to South-East aspects mainly above 1000 metres. The avalanche hazard is Moderate

Mountain Conditions

Observed Mountain Travel Conditions	Good cover above 800 metres
Comments	Good cover remains at plateau level and in gullies and slopes.
