

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Saturday 05/03/2011

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The snowpack will continue to stabilise and become more firm in the cooler conditions. Any new windslab deposits lying on Southerly aspects are expected to be small and isolated. The avalanche hazard will be Low.

Forecast Weather Influences

It is expected to be mostly dry with a few light snow flurries overnight on moderate, decreasing to light Northerly winds. The freezing level will lower to 600 metres.

Comments

Weak front expected tonight with high pressure building again on Saturday.
