

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Saturday 19/03/2011

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Snowpack weaknesses will remain within the snowpack. Areas most affected will be on North-West through North and East to South-East aspects above 900 metres particularly around corrie rims, crag aprons and gully tops. Localised instabilities will affect other aspects. Cornices will be weak and prone to collapse. The avalanche hazard will be Considerable.

Forecast Weather Influences

It will remain dry with moderate South-West winds backing to South during the day. The freezing level will be at 900 metres.

Comments

Skis and snow shoes recommended for travel, otherwise hard going underfoot, unless on wind exposed ridges.
