

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Monday 21/03/2011

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The snowpack will continue to moisten at all levels. Wet snow instabilities will be present on many steeper slopes above 900 metres, especially in gullies, around coire rims and on North to East aspects where avalanches are likely. Cornices will be prone to collapse. The avalanche hazard will be Considerable.

Forecast Weather Influences

The freezing level is expected to be well above the summits throughout the forecast period with light rain at all levels. Winds are expected to be strong and strengthening Westerly.

Comments

Rockfall will also be a hazard in the thawing conditions.
