

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Friday 25/03/2011

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Good stability expected in many locations. Some marginal wet surface snow instability is possible on steep slopes directly exposed to the sun below 900 metres but this will be localised. Cornice stability will remain suspect. The avalanche hazard will be Moderate.

Forecast Weather Influences

Remaining dry with the freezing level close to summits, though a slight frost in the glens is possible overnight. Winds will be moderate North-Westerly.

Comments

Check the blog later for photos and potential for the weekend.
