

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Thursday 31/03/2011

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Heavy rainfall will add weight and lubrication to older snow deposits on very steep ground above 750m. Wet, collapse prone cornices and ice will threaten slopes below with high potential loading mainly on North West through North to South East aspects. The avalanche hazard will be Moderate

Forecast Weather Influences

Heavy overnight rain easing during the morning. Winds will be Southerly becoming very strong Westerly. Freezing level well above summits.

Comments

Falling cornices, rocks and ice all serious threats in the thaw.
