

## THE AVALANCHE HAZARD WILL BE LOW

### Avalanche Hazard Forecast for Saturday 09/04/2011

#### Avalanche Problems

#### Forecast Snow Stability & Avalanche Hazard

The snowpack will remain moist and continue to thaw at all levels. Stability will generally be good at all altitudes and on all aspects. Surface instabilities may develop on steep slopes exposed to the effects of the sun. Any remaining cornices will be prone to collapse. The avalanche hazard will be Low.

#### Forecast Weather Influences

Throughout the forecast period it is expected to be dry, with the freezing level well above the summits. Moderate West-North-Westerly winds are expected to back South-South-Westerly overnight and strengthen during the day.

#### Comments

Rockfall will continue to be a hazard in these mild conditions.
