

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Friday 16/12/2011

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Little change. The snowpack will be generally stable. In highest, steepest backwalls and carries some residual instabilities will persist above 850m on mainly Northerly to Easterly aspects. The avalanche hazard will be Moderate

Forecast Weather Influences

Remaining generally dry and cold. Winds will be light, initially South then North on a strengthening North Westerly airflow.

Comments

A widespread breakable crust lends for slow progress – post holing above 400m. The trail into the main coire yet to be fully ‘forged’. Skis very useful for access (will use them tomorrow!)
