

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Sunday 18/12/2011

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The new windslab build-up on East to South aspects above 850 metres is poorly bonded. The extent of this unstable slab is mainly confined to isolated high gully exits and some scarp slopes. The avalanche hazard will be Considerable.

Forecast Weather Influences

It will be a dry, bright, cold day with North-Westerly winds. Freezing level at 150 metres.

Comments

It is a cold snowpack with a steep temperature gradient and poorly bonded localised wind slab, which are early season warnings.
