

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Saturday 24/12/2011

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

New accumulations of windslab will develop on North through East to South-East aspects above 850 metres. Localised, wet snow, surface instabilities will develop on these aspects as the temperature increases. Elsewhere the snowpack will thaw but remain well bonded and stable. The avalanche hazard will be Moderate.

Forecast Weather Influences

Snowfall will turn to rain overnight which will continue during the day as the freezing level rises from 700 to 1500 metres. The winds will be strong South-West to Westerly.

Comments

A general re-freeze today, some ice and gully lines being climbed. A return to mild wet conditions for Christmas Eve.
