

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Sunday 25/12/2011

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Recent accumulations of snow at summit levels and at the tops of gullies and slopes will continue to present wet snow instabilities, mainly on North through East to South-East aspects above 1000 metres. Localised wet snow instabilities will also be present on other aspects. The avalanche hazard will be Considerable.

Forecast Weather Influences

Rain, or wet snow at the highest levels is expected overnight, with a freezing level around 1200 metres. During the day the freezing level will rise well above the summits, with heavy rain expected at all levels. Winds will be very strong South-Westerly.

Comments

A very windy mild wet day is expected for Christmas Day. HAPPY CHRISTMAS.
