

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Tuesday 27/12/2011

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The snowpack will become much firmer and well stabilised in most locations. A little new thin windslab is possible on North to North-East aspects above 1000m but accumulations will be small and tend to be localised. The avalanche hazard will be Moderate

Forecast Weather Influences

Much drier and cooler with a few light snow or sleet showers later. Winds will be moderate West later South-West.

Comments

Glide cracks continue to open on traditional full depth avalanche sites in our area. Some residual hazard of full depth avalanches on E to SE aspects
