

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Tuesday 27/12/2011

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The existing snowpack will consolidate further and stabilise in the cooler conditions. Fresh windslab will be deposited on North-West through North to East aspects above 800 metres through the afternoon. These deposits are not likely to be extensive. However, they will go through a period of poor stability as the freezing level rises. The avalanche hazard will be Moderate.

Forecast Weather Influences

It will be dry overnight and through the morning with light winds and a freezing level of around 800 metres. Through the afternoon, a band of light snow will push across the area. This will turn to rain as the freezing level rises above the summits. Southerly winds will strengthen.

Comments

Snowpack in Glen Coe looking an quite a sorry state at the moment, hopefully we will get some more snow in a few days time.
