

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Friday 30/12/2011

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Drifting will continue leading to further weaknesses within the snowpack. Avalanches are likely mainly on North-East through East to Southerly aspects above 800 metres. Due to cross loading instabilities will also affect West to North aspects above this altitude. The avalanche hazard will be Considerable.

Forecast Weather Influences

Snowfall overnight and into Friday will eventually turn to rain much later in the day below 600 metres. The freezing level will rise from 500 to 800 metres and winds will be strong North-Westerly decreasing to moderate and turning South-Easterly.

Comments

Milder air expected towards the end of the day on Friday.
